

CoCoMo Budget:

Let's assume a medium-sized project with approximately 14,000 lines of code.

So, Kilo lines of code (kLOC)= 14

Development Mode: For our project the development mode is *organic*.

- Effort Estimation:

$$\text{Effort} = 2.4 \times (kLOC)^{1.05}$$

$$\text{Effort} = 2.4 \times (14)^{1.05} = 39 \text{ PM (Person per month)}$$

- Duration Estimation:

$$\text{Duration} = 2.5 \times (\text{Effort})^{0.38}$$

$$\text{Duration} = 2.5 \times (39)^{0.38} = 10 \text{ Months} \approx 1 \text{ year (2 months for safety)}$$

- Staffing Estimation:

$$\text{Staffing} = \frac{\text{Effort}}{\text{Duration}} = \frac{39}{10} = 3.9 \approx 4 \text{ people}$$

- For our software cost per line of code is estimated 100 BDT

$$\text{Total Cost} = \text{LOC} \times \text{Cost per Line of Code}$$

$$\text{Total Cost} = 14,000 \times 100 = 14,00,000 \text{ BDT}$$

- Assume we allocate 25% of the total budget for testing.

$$\text{Testing Budget} = 0.25 \times \text{Total Budget}$$

$$\text{Testing Budget} = 0.25 \times 14,00,000 = 3,50,000 \text{ BDT}$$

- Security Features Implementation & Security Tools: 5,00,000 BDT

- Post Delivery Development Fee = 3 Years Service \times 30 hours per month \times

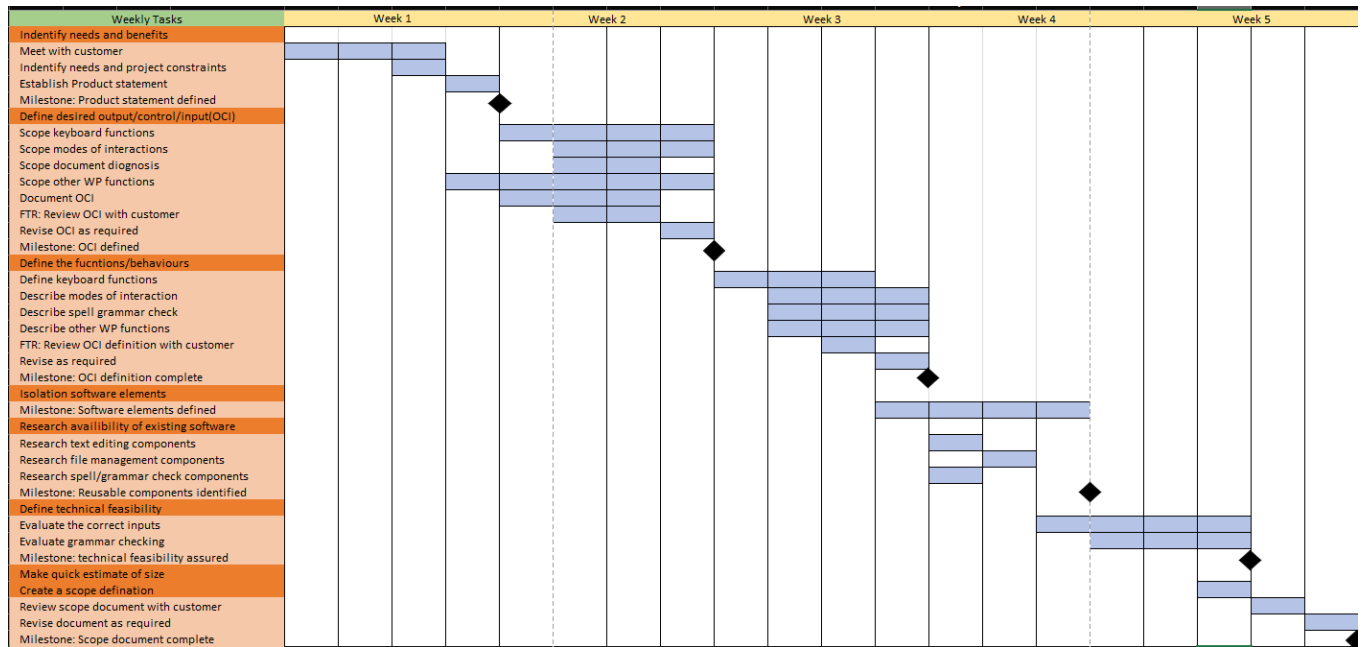

$$\text{Per Hour 400 BDT} = 3 \times 12 \times 30 \times 400 = 4,32,000 \text{ BDT}$$

- Server Management Cost:
 1. Cloud Services: 20,000 BDT per month for virtual machines, storage, and other cloud services.
 2. Server Administration: 15,000 BDT per month for server administration and support.
 3. Backup and Disaster Recovery: 30,000 BDT per month for backup and recovery services.

- Total Expenses is estimated about $14,00,000 + 3,50,000 + 5,00,000$
 $= 23,00,000$ BDT

- Total Profit = Total Revenue – Total Expenses
Total Profit = $30,00,000 - 23,00,000 = 7,00,000$ BDT

Task Scheduling For month-1

Timeline chart (person)
